Yeraz — ways to see a Tree

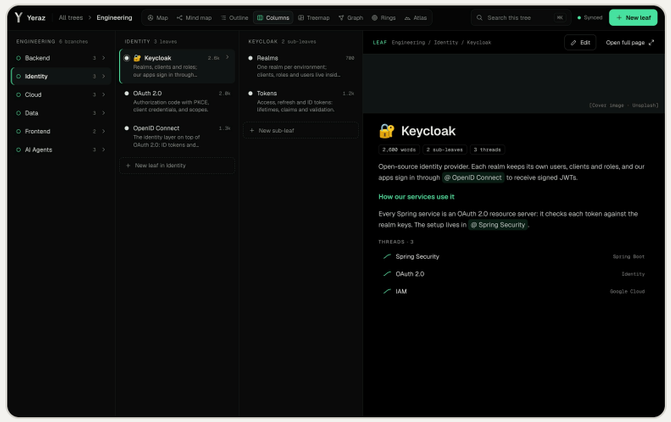

Seven alternative views for the Tree screen, next to today's radial map. Each screen uses the design's Engineering Tree (6 branches, 30 leaves, 17 threads) and the theme tokens of `design/themes/themes.json`; Keycloak is the selected leaf. Views 01–05 are conventional, 06–07 are the experimental ones, and 08–09 show those two in the light Paper theme. The last two pages (10–17) show all seven on a phone.

09 **Atlas** Paper · Violet

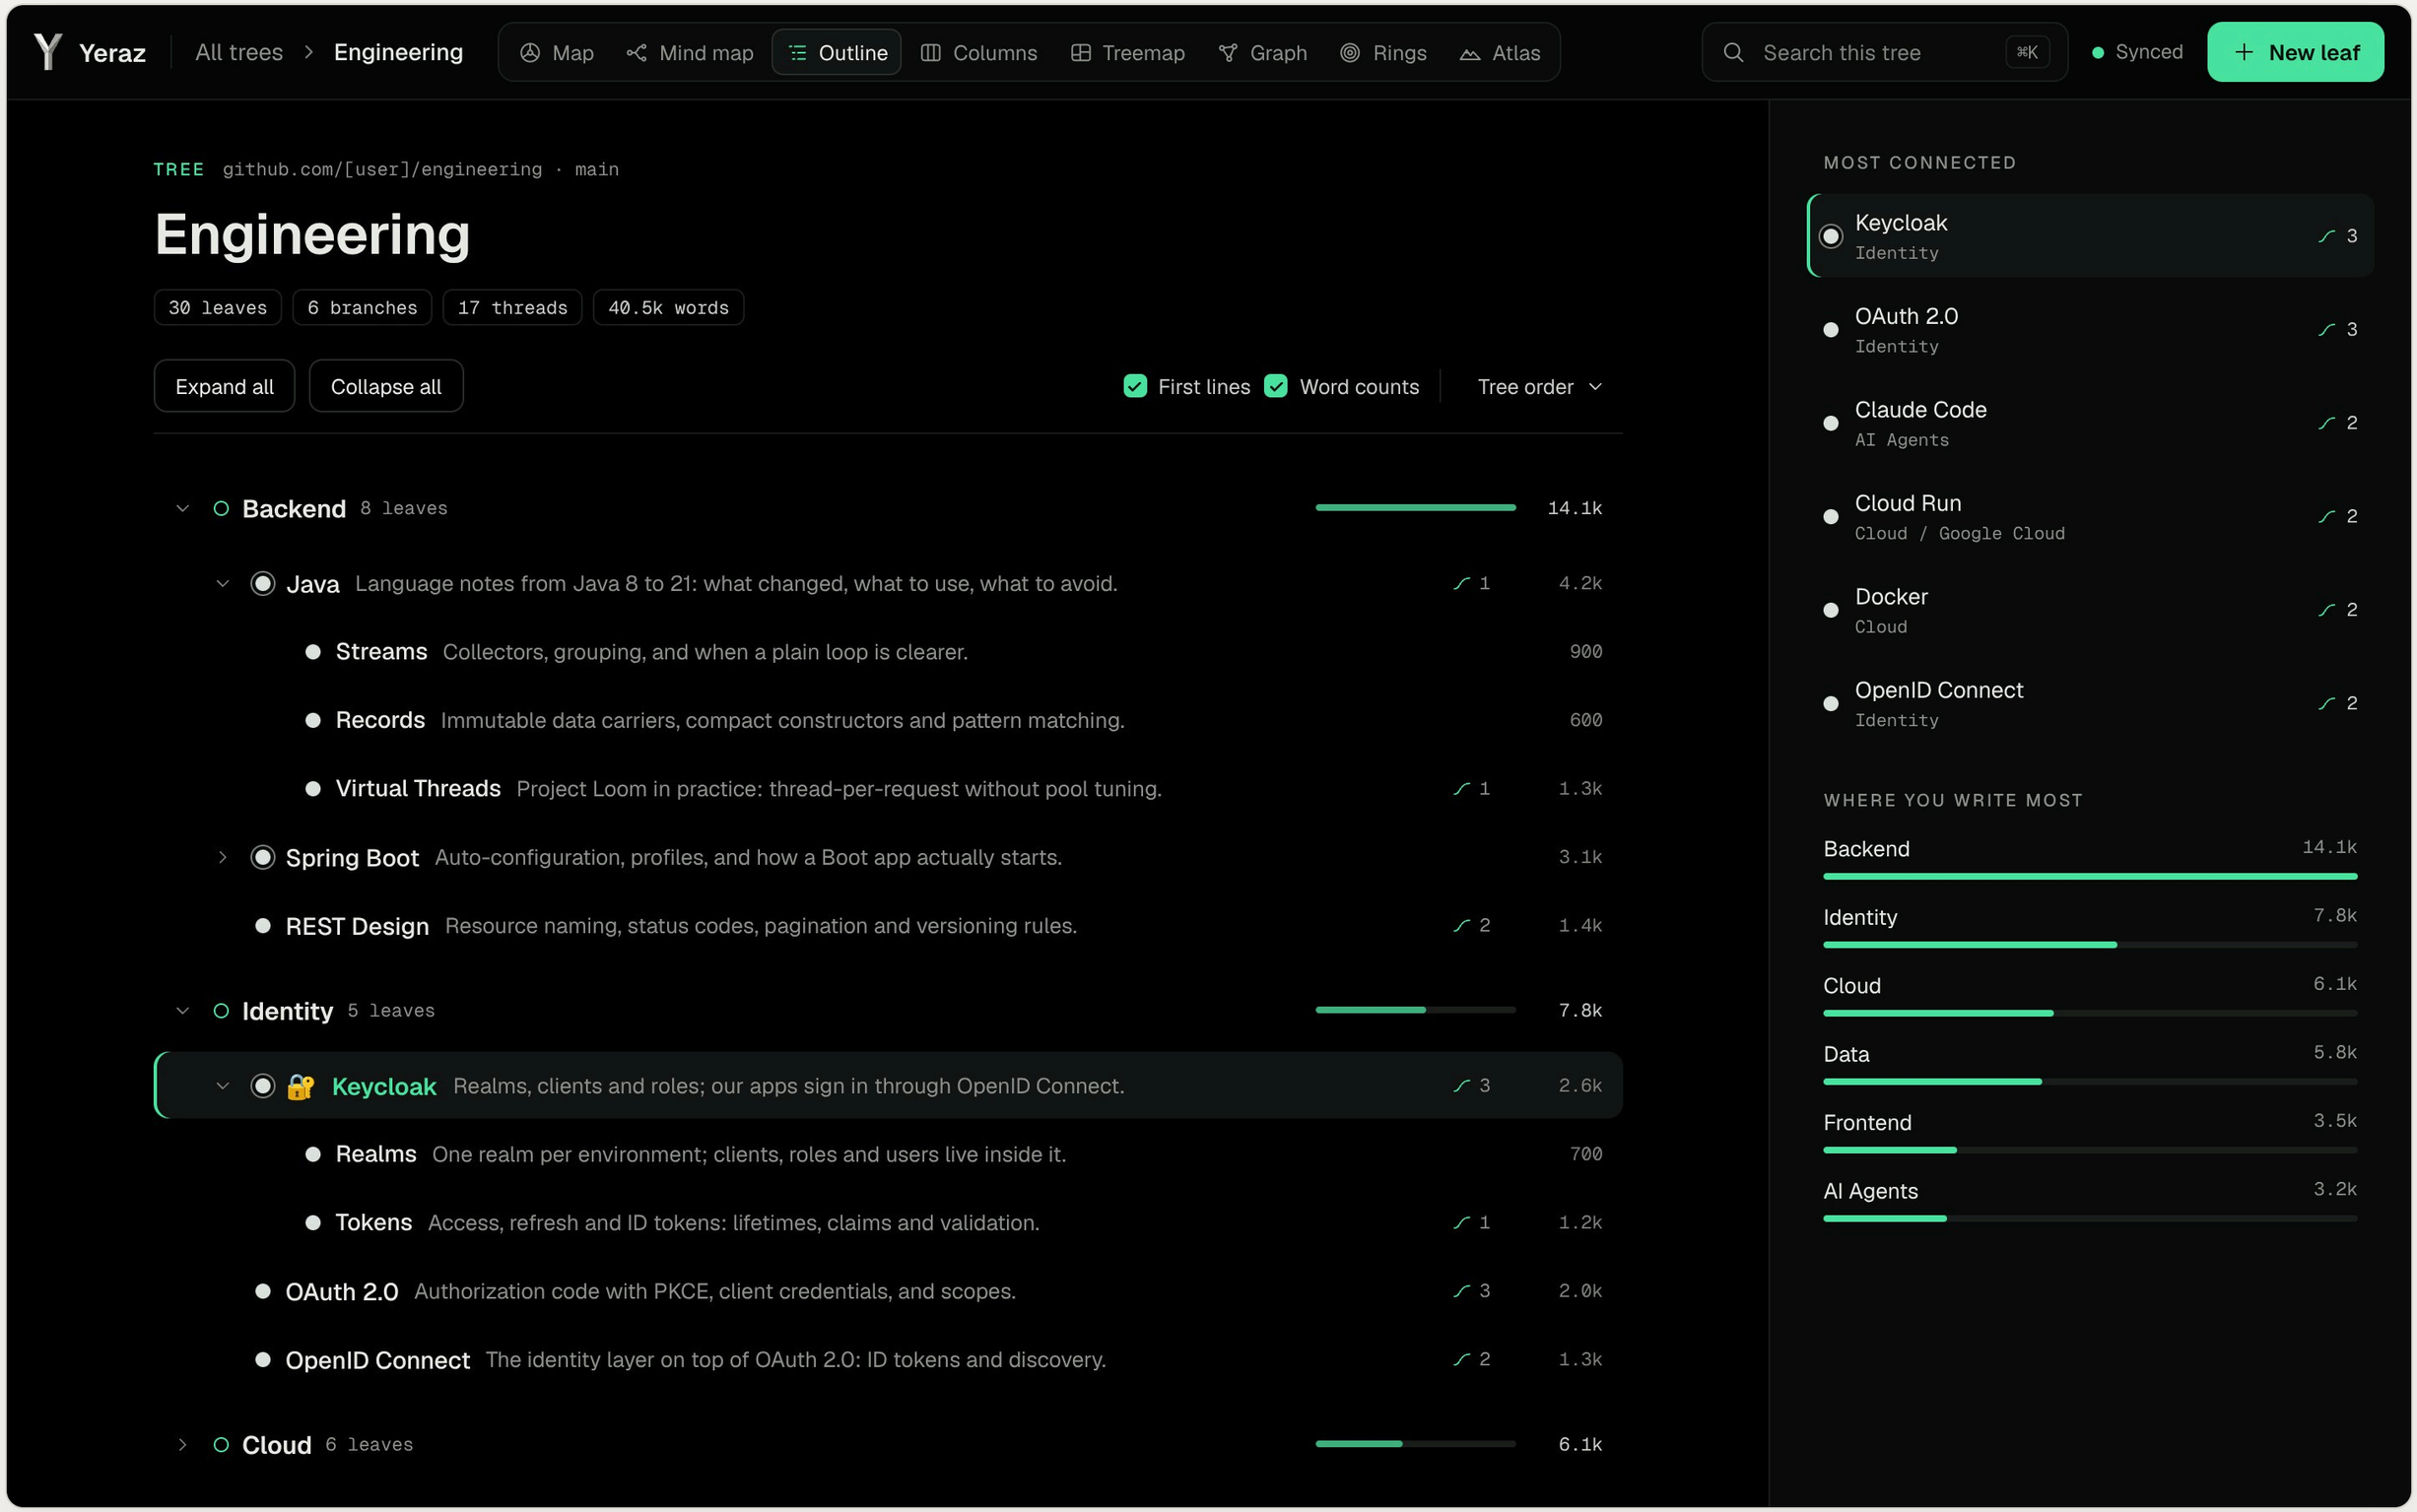

01 # Mind map `Vanta · Green`

Branches either side of the core, leaves and sub-leaves in rows; the selected leaf’s threads arc over the map.

02 # Outline `Vanta · Green`

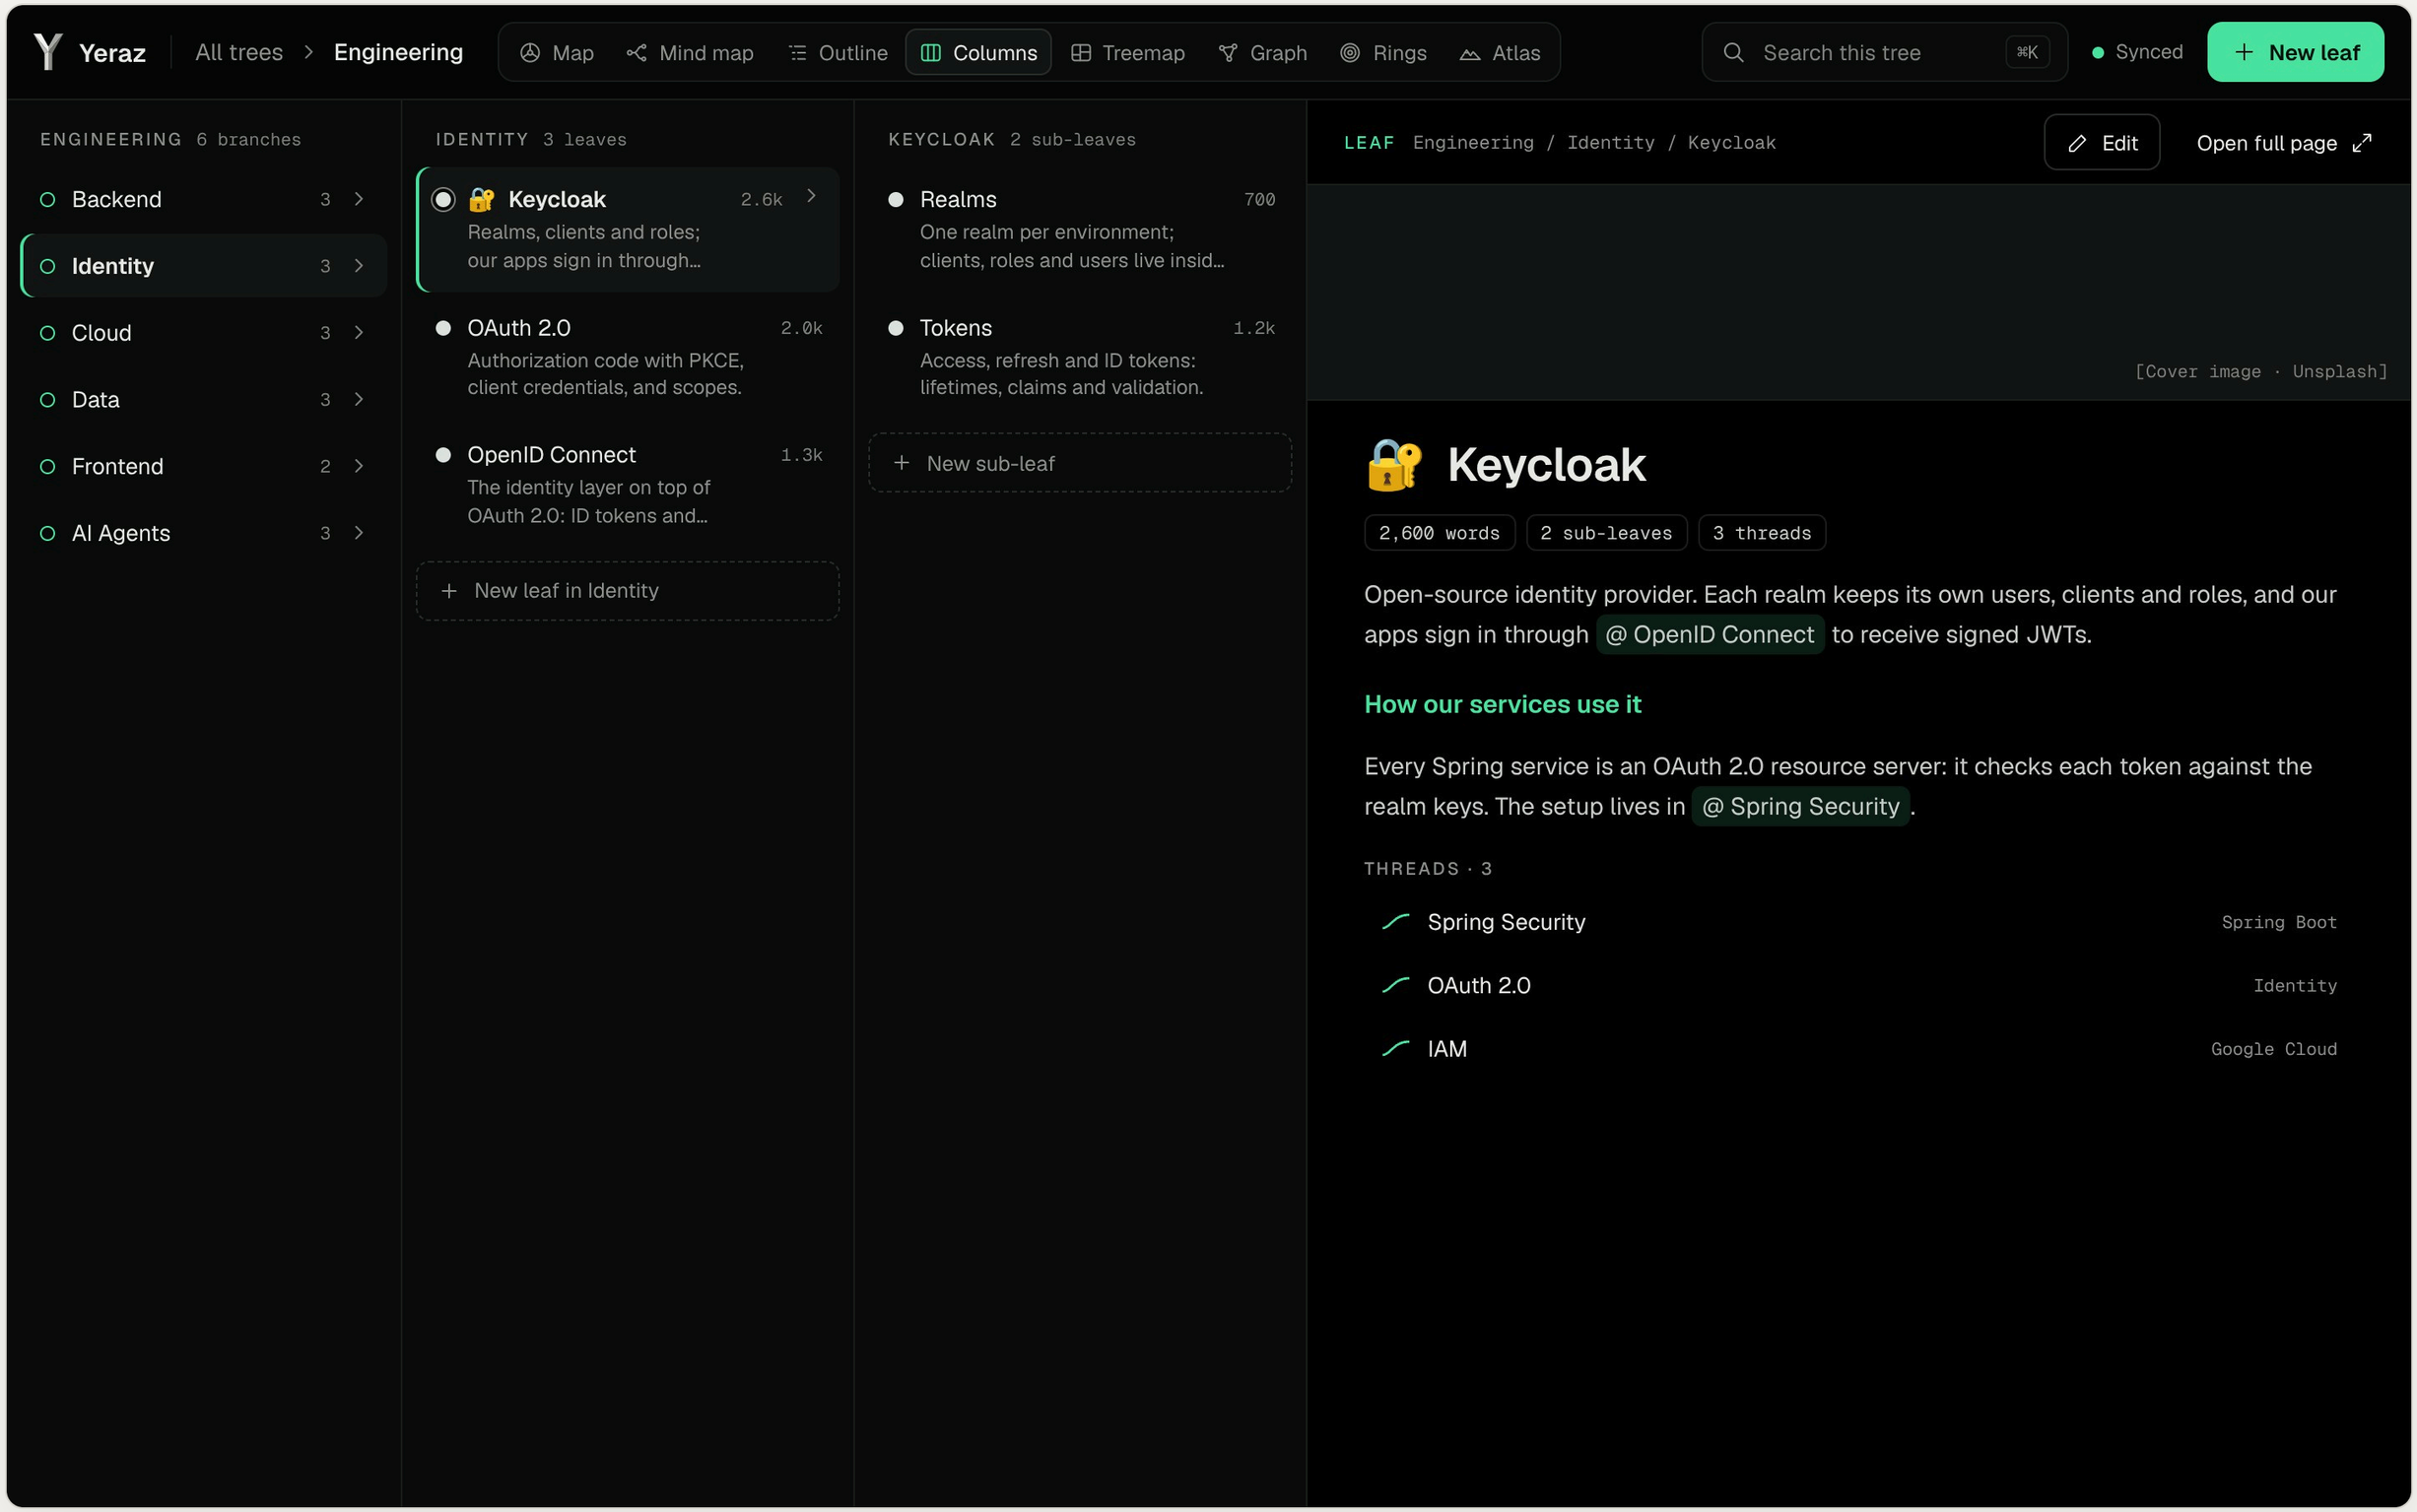

The Tree as a table of contents: each leaf with its first line, thread count and words. The side panel lists the most connected leaves and words per branch.

03 Columns

Vanta · Green

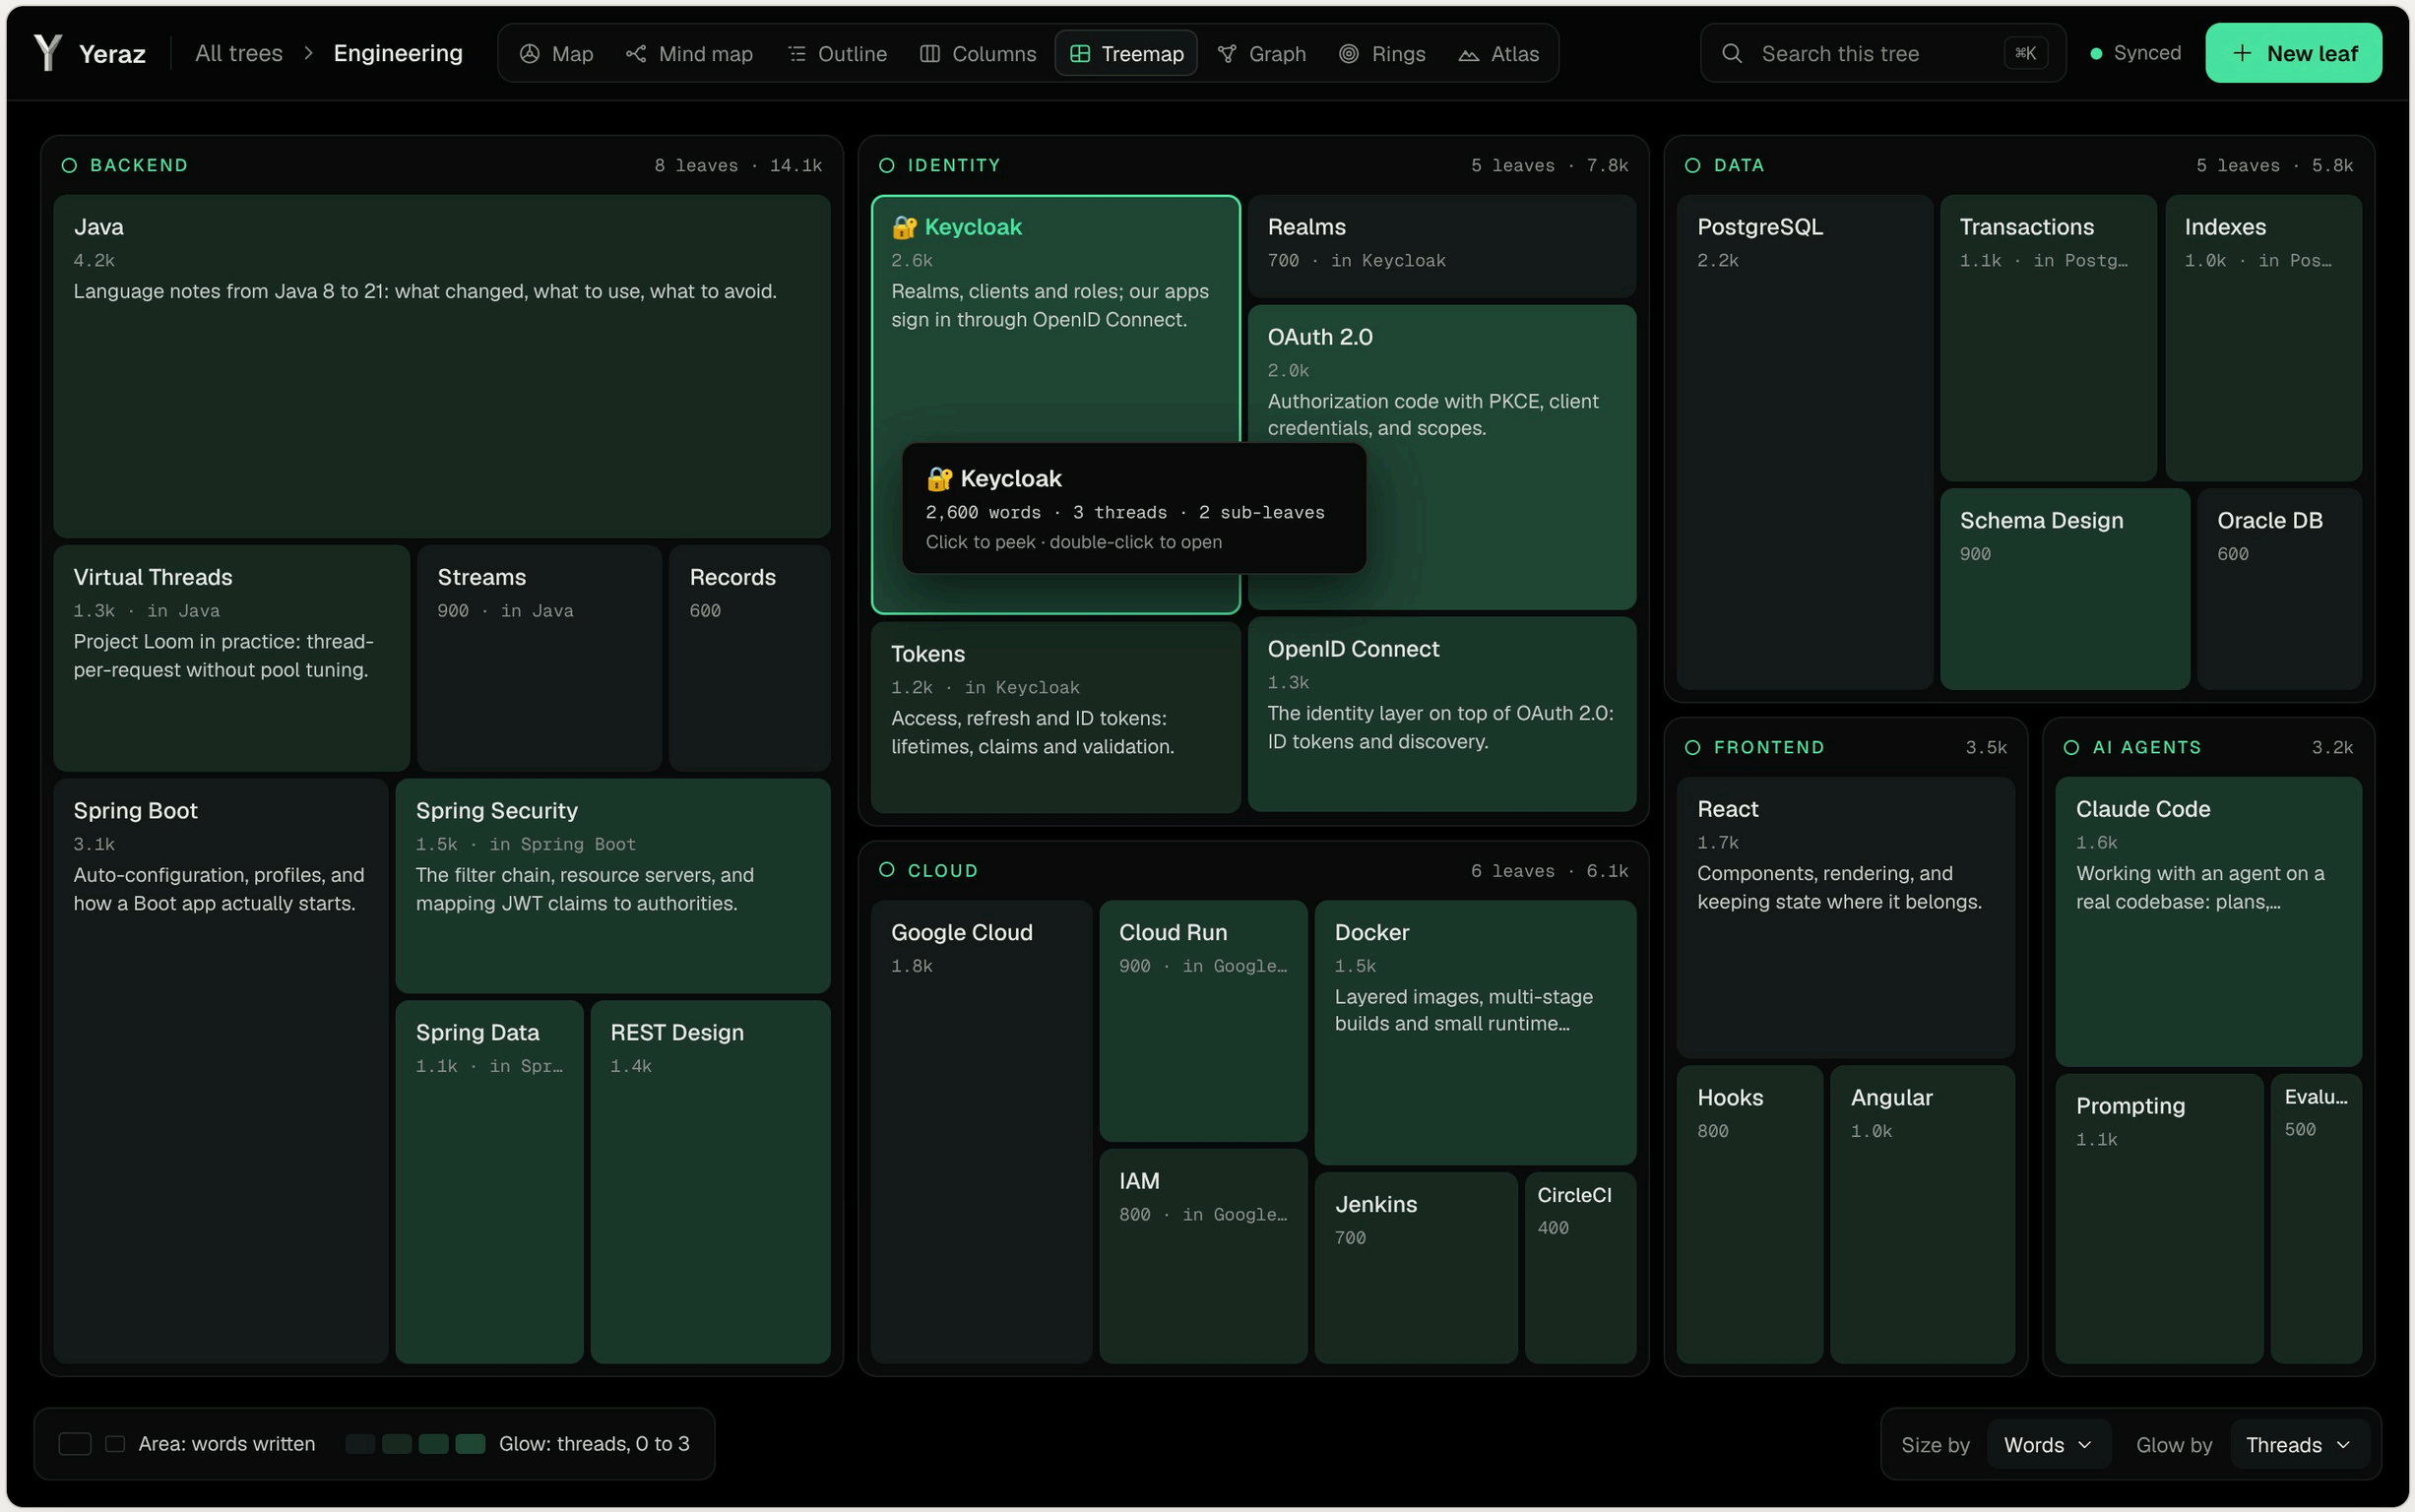

Walk the Tree one level at a time, like Finder columns, with the selected leaf open beside it (cover, body, threads).

04 Treemap

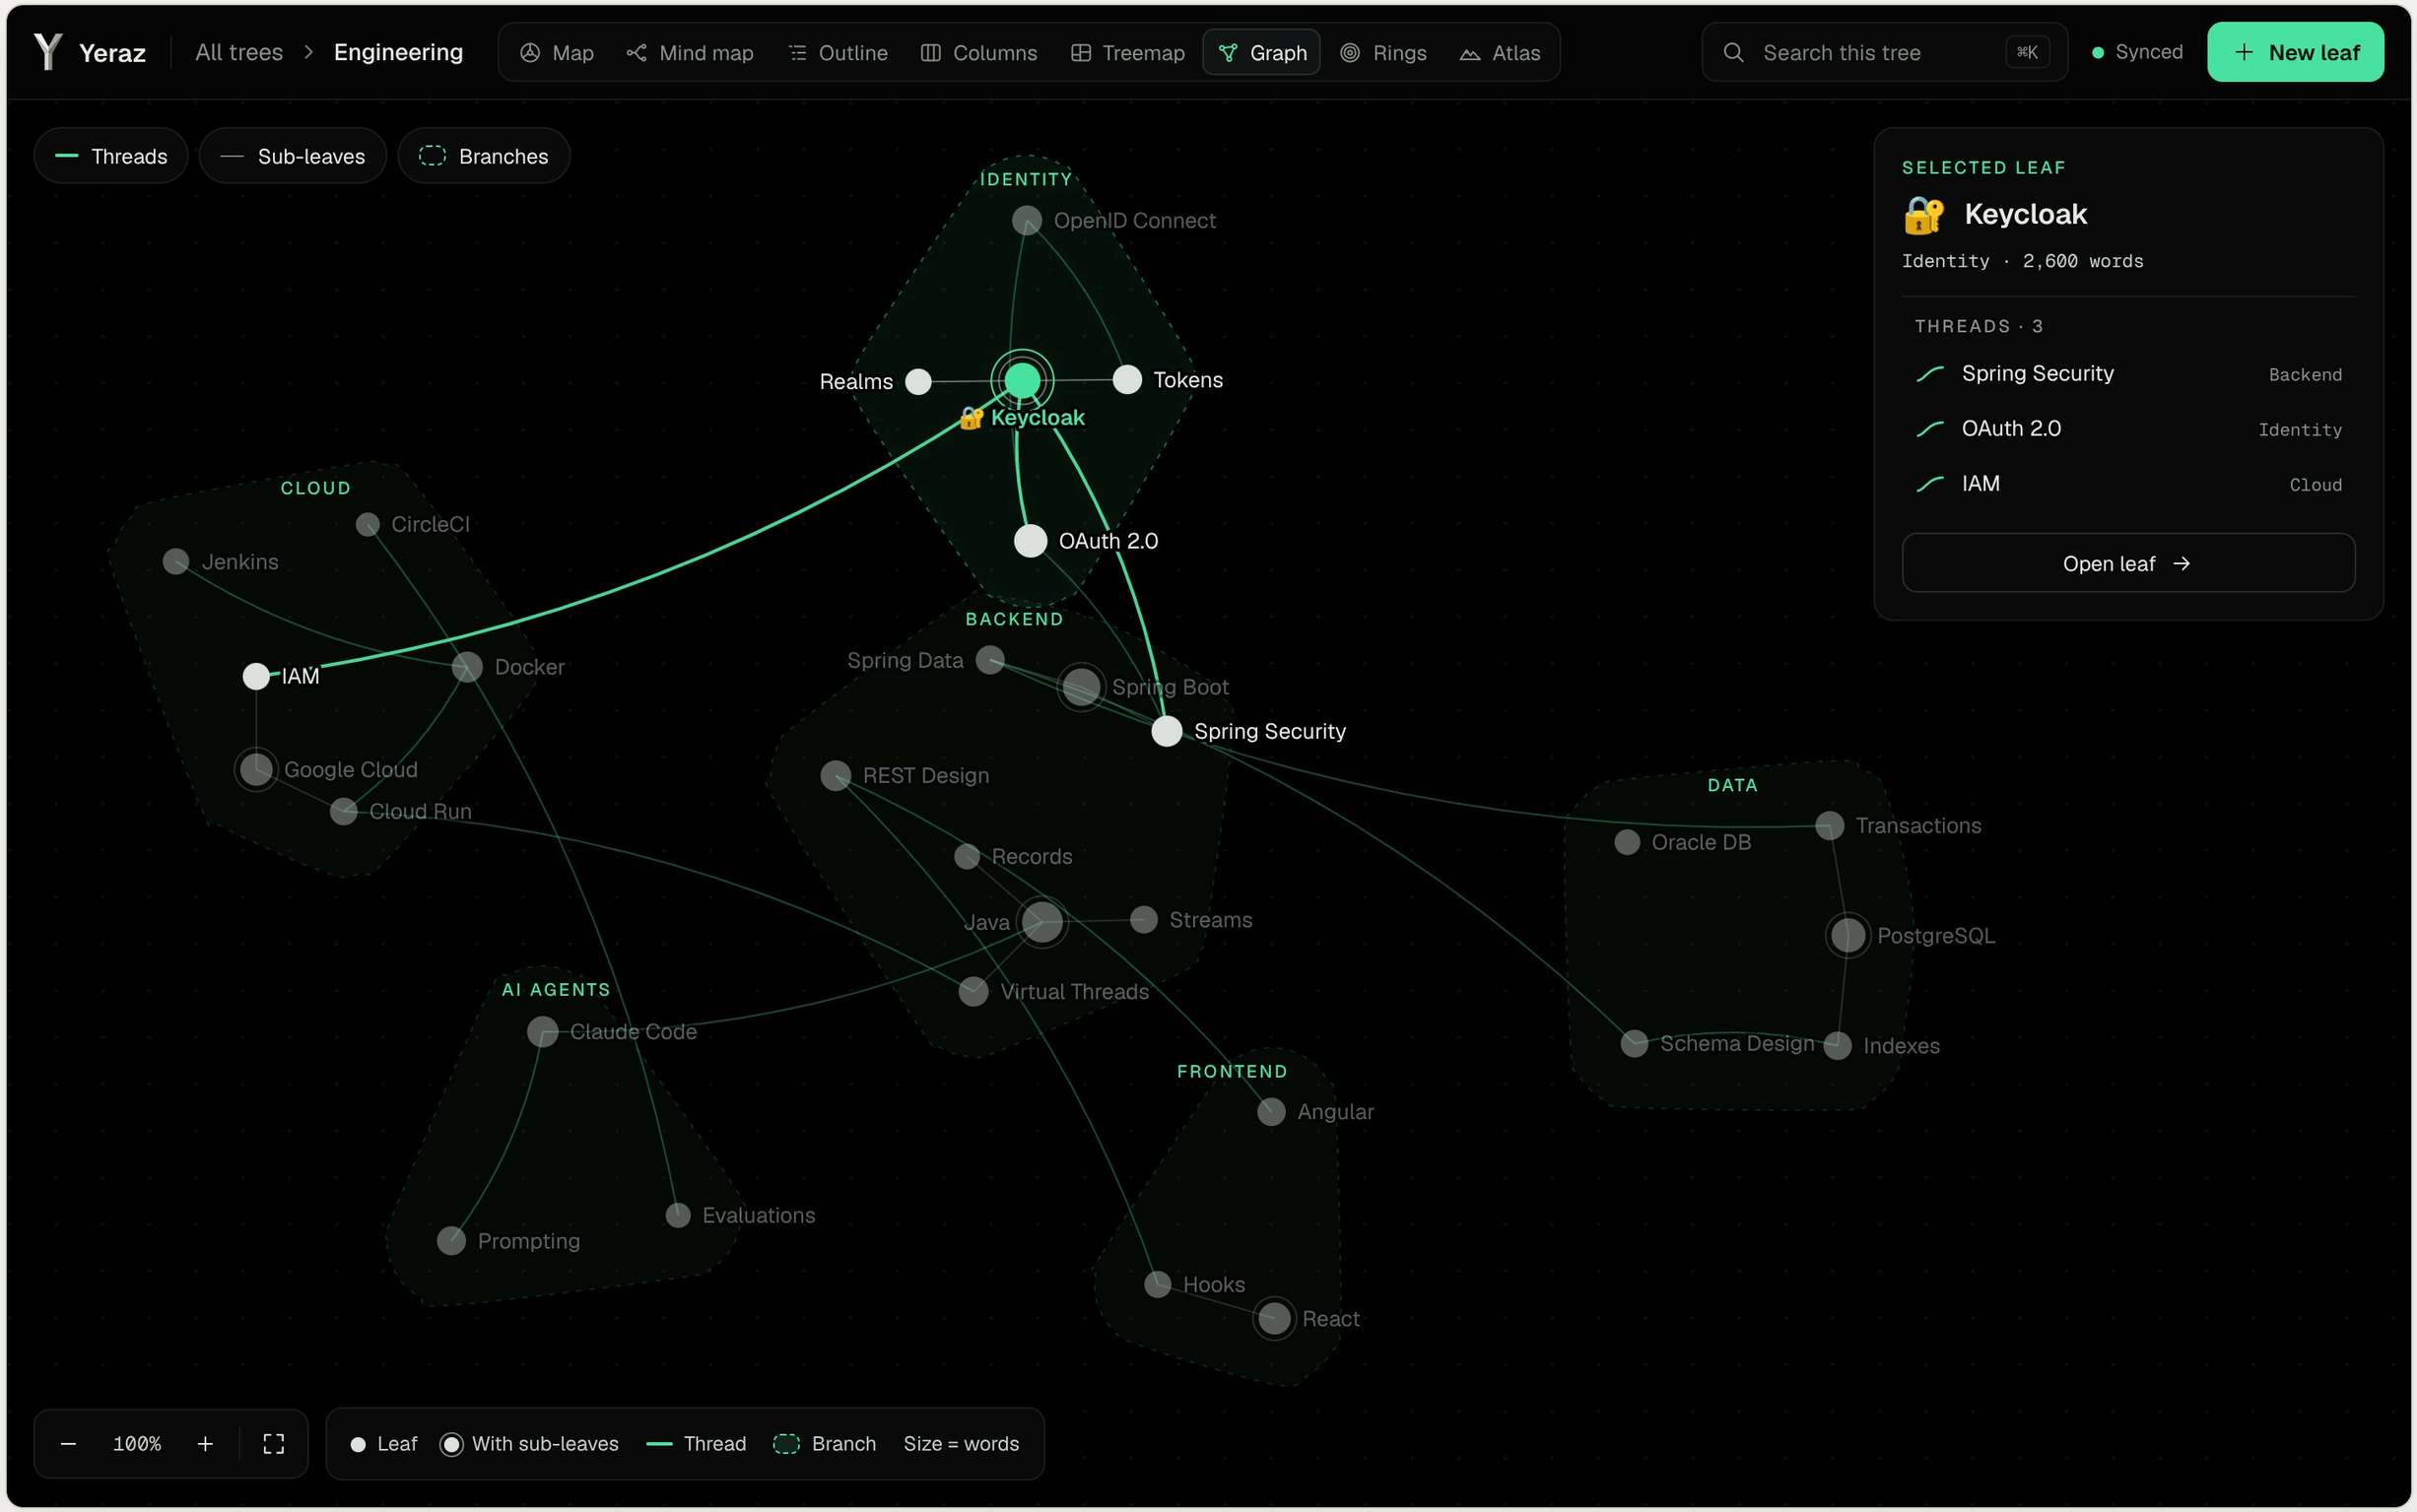

Vanta · Green

Every leaf is a tile sized by its words, grouped by branch. Glow = number of threads (0 to 3).

05 # Graph `Vanta · Green`

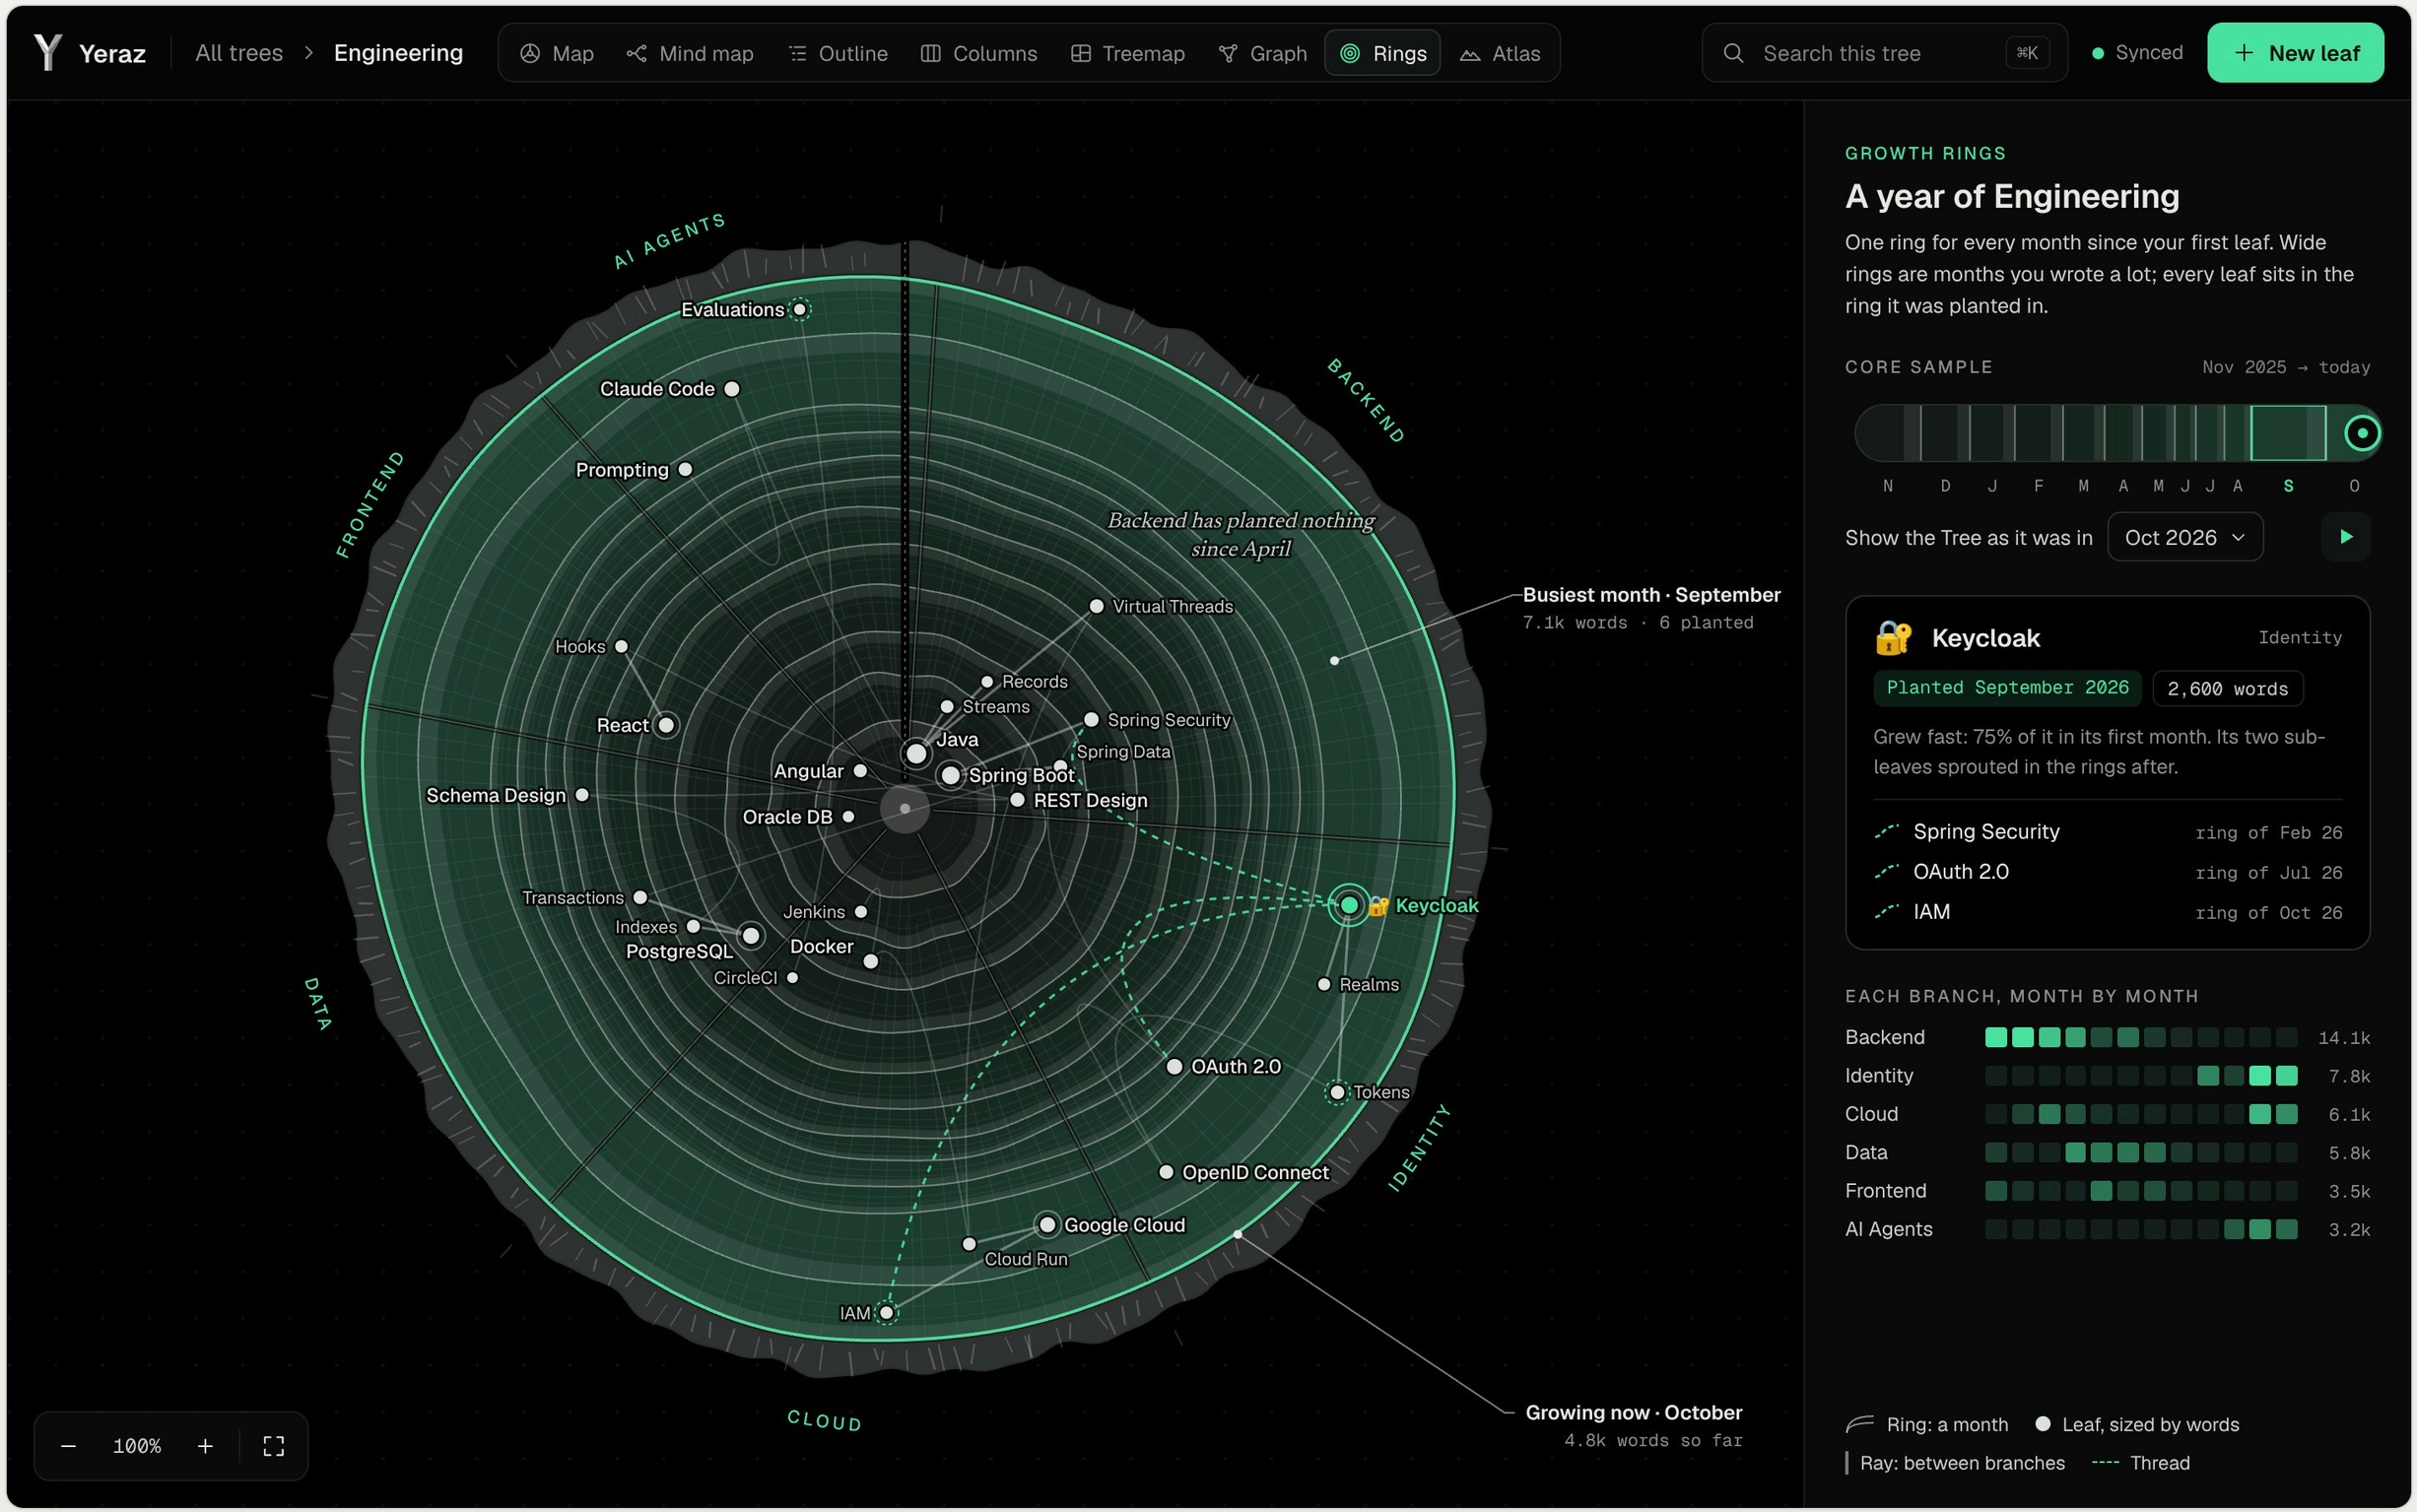

Leaves as a network of threads; each branch is a soft cluster (dashed hull). Dot size = words.

06 Growth rings

Vanta · Green

The Tree cut across its trunk. One ring per month (Nov 2025 at the centre, Oct 2026 at the bark); ring width = words written that month. Each leaf sits in the ring of the month it was created, and its dot size = words. Branches are slices separated by rays; threads arc inside. The current month is outlined. Panel: core sample timeline with a “Show the Tree as it was in…” picker, month-by-month grid per branch, selected leaf. Creation dates in the mockup are invented: the real app would take them from git history.

07 # Atlas

Vanta · Green

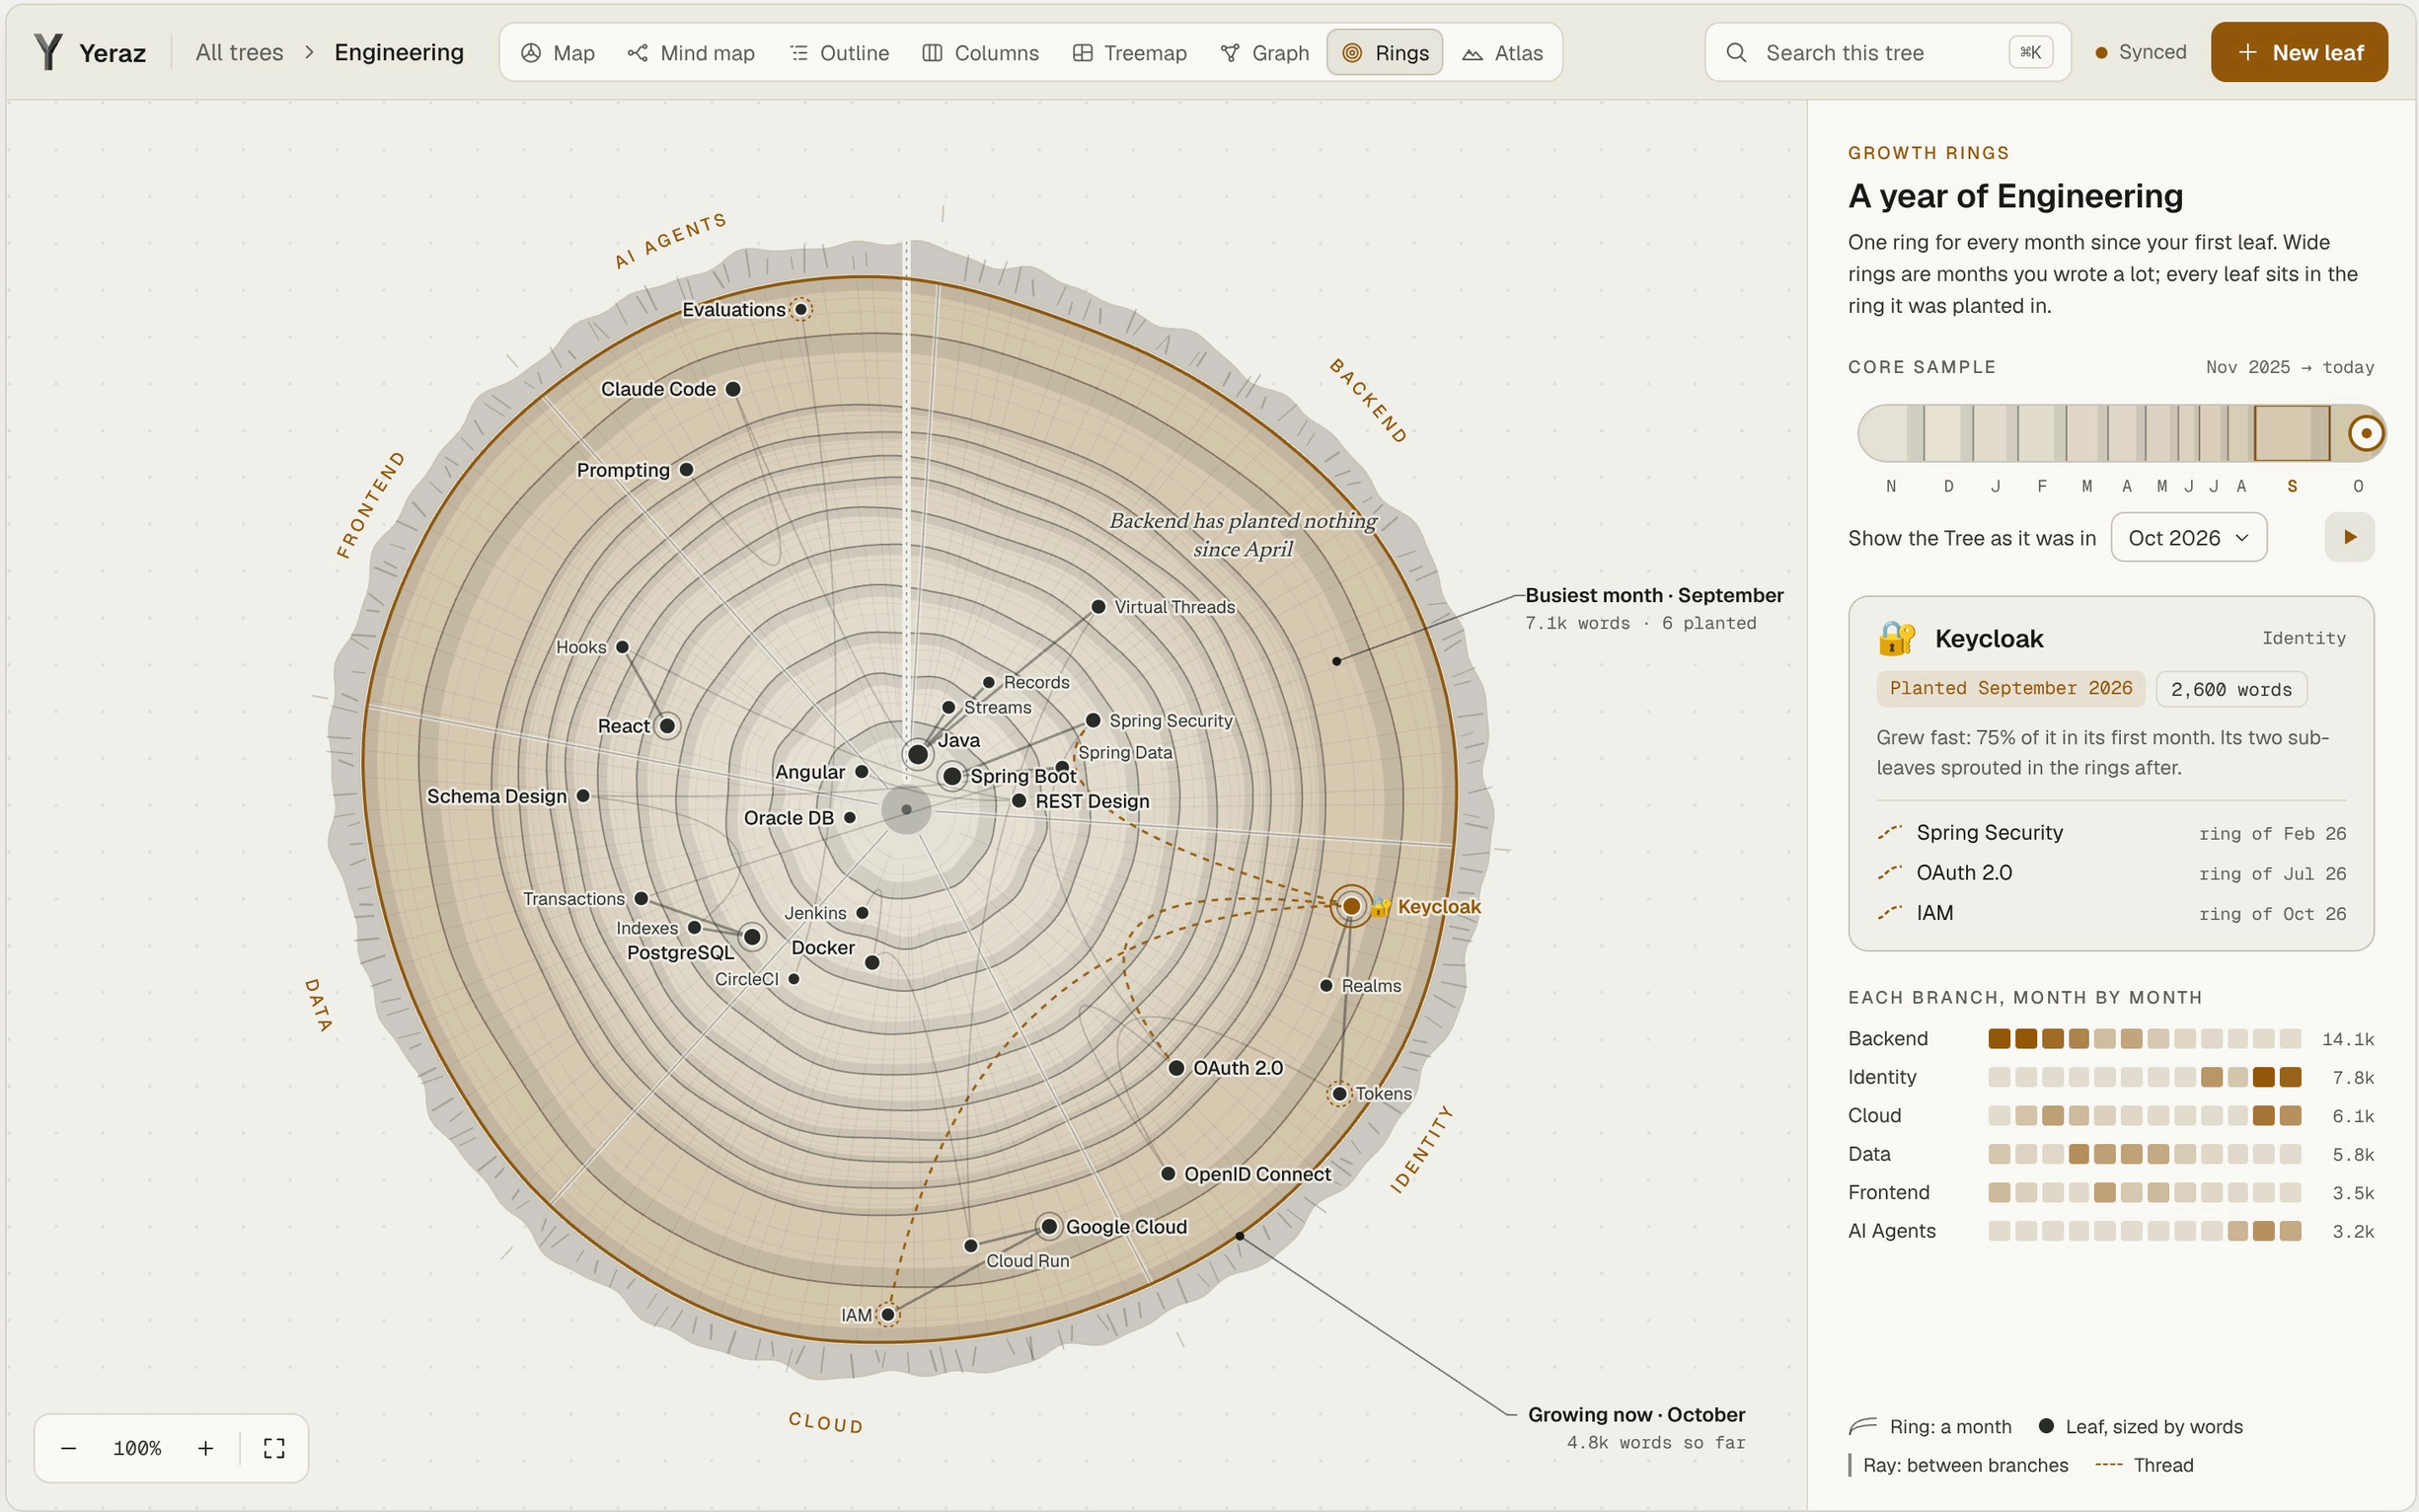

Every branch is an island and every leaf a peak as high as its words (1 word = 1 m); sub-leaves are foothills. One elevation field (a Gaussian bump per leaf) gives the coastline, contour lines every 500 words, height colours and hillside shading strokes. Threads are dashed sea routes between islands and dotted trails within one island. Title box, compass, legend, selected-leaf card.

08 Growth rings

Paper · Amber

The same view in the light Paper theme: every colour is a theme token.

09 # Atlas

Paper · Violet

The same view in the light Paper theme: every colour is a theme token.

Phone · 1/2

On a phone

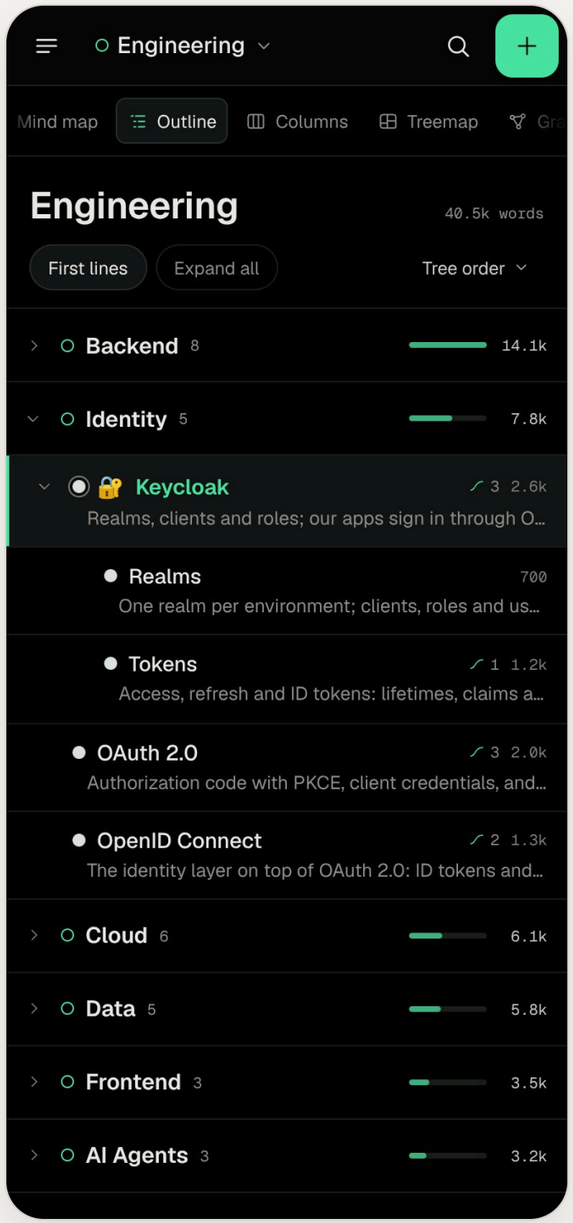

390 × 844 · Vanta · Green

The header is the one in Mobile.dc.html; under it, the view switcher scrolls sideways. Tapping a leaf opens the peek sheet at the bottom, as on the radial map.

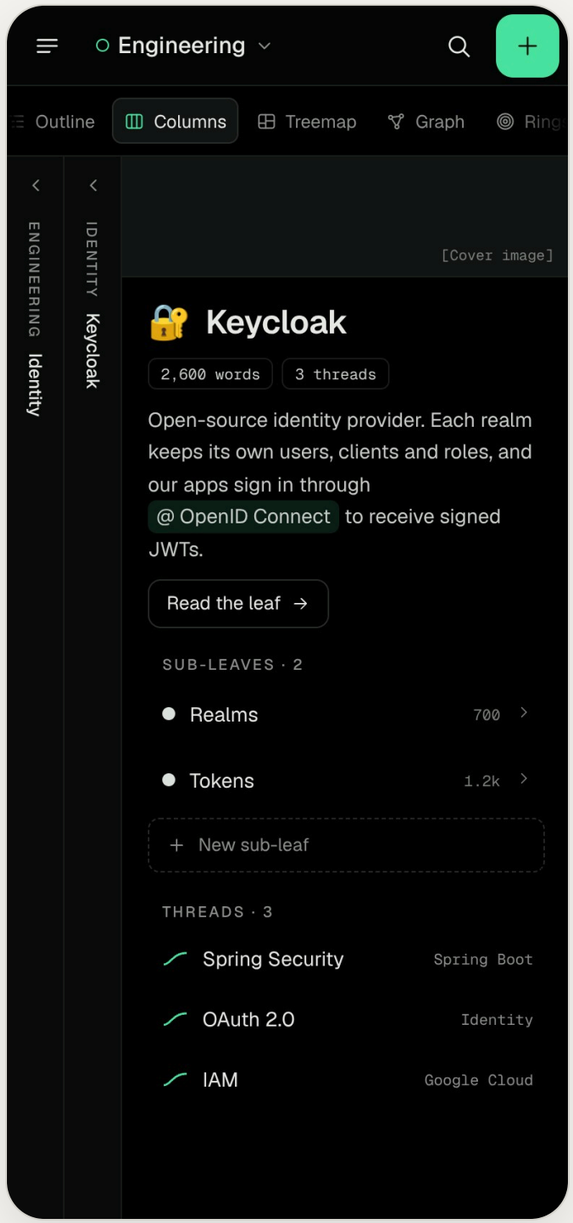

10 **Mind map**

One-sided and vertical: the core on top, branches down a spine, scrolled with the thumb.

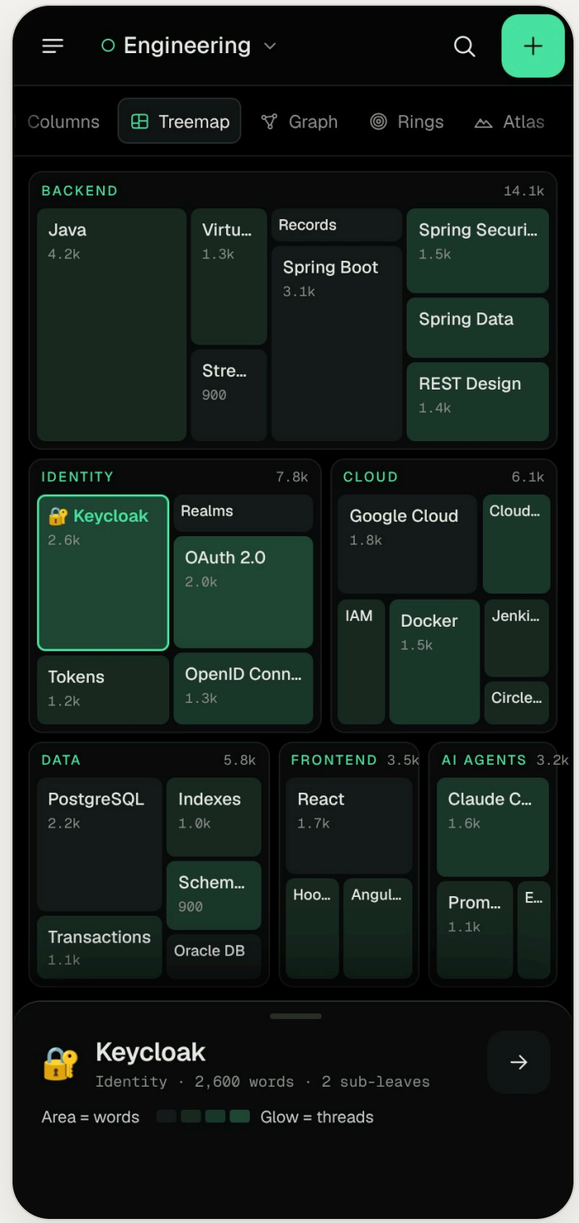

11 **Outline**

A full-width list with the first line under each title; the chevron opens a branch or leaf.

12 **Columns**

Parent columns fold into spines down the left edge; tap a spine to go back a level.

13 **Treemap**

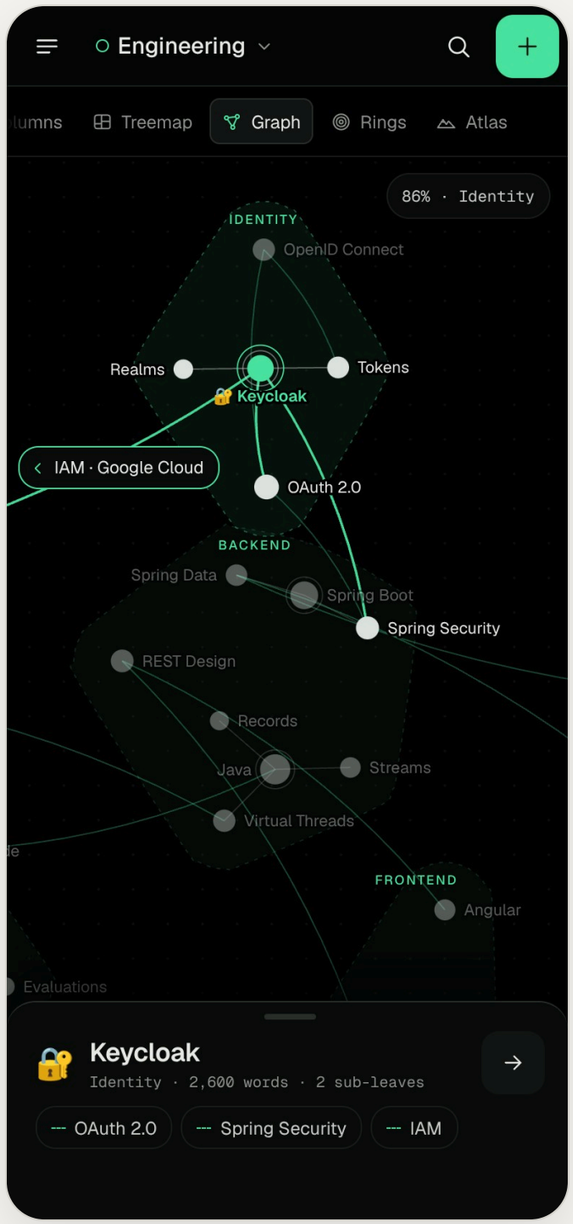

The same squarified layout in portrait; the selected tile's leaf sits in the peek sheet.

Phone · 2/2

On a phone

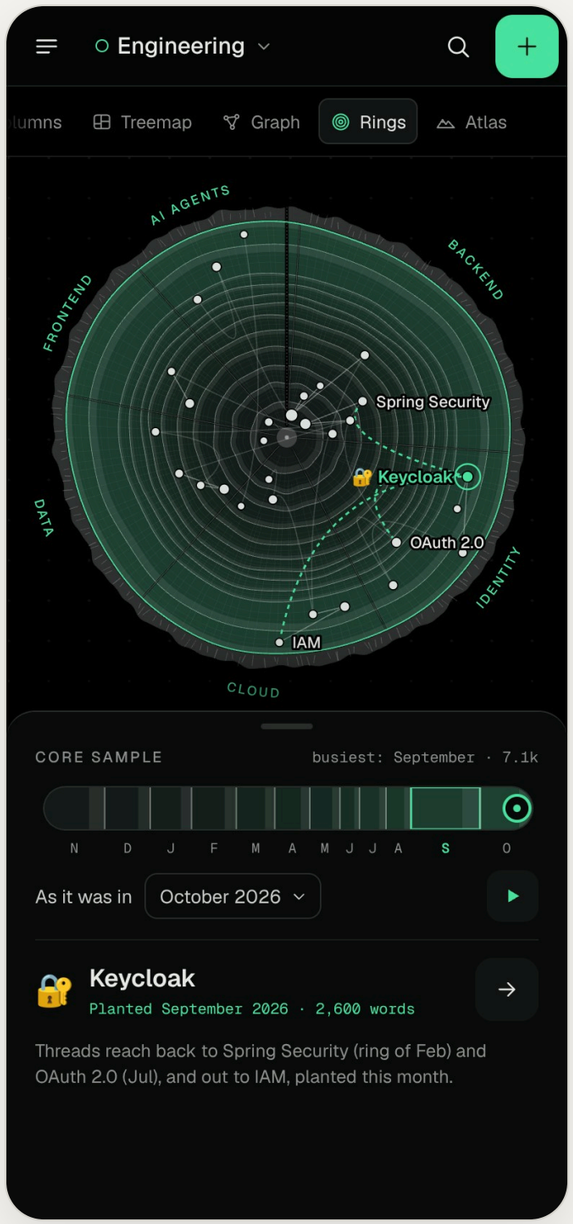

390 × 844 · Vanta · Green

The header is the one in Mobile.dc.html; under it, the view switcher scrolls sideways. Tapping a leaf opens the peek sheet at the bottom, as on the radial map.

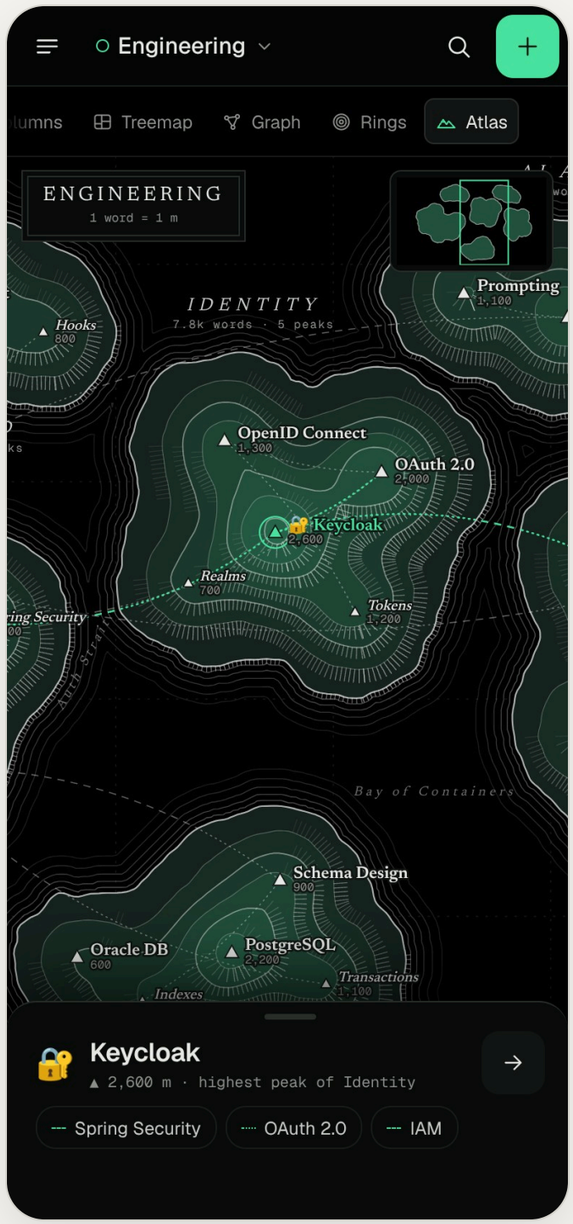

14 Graph

Zoomed onto the selection's cluster; a thread that leaves the screen gets an edge chip (← IAM · Google Cloud).

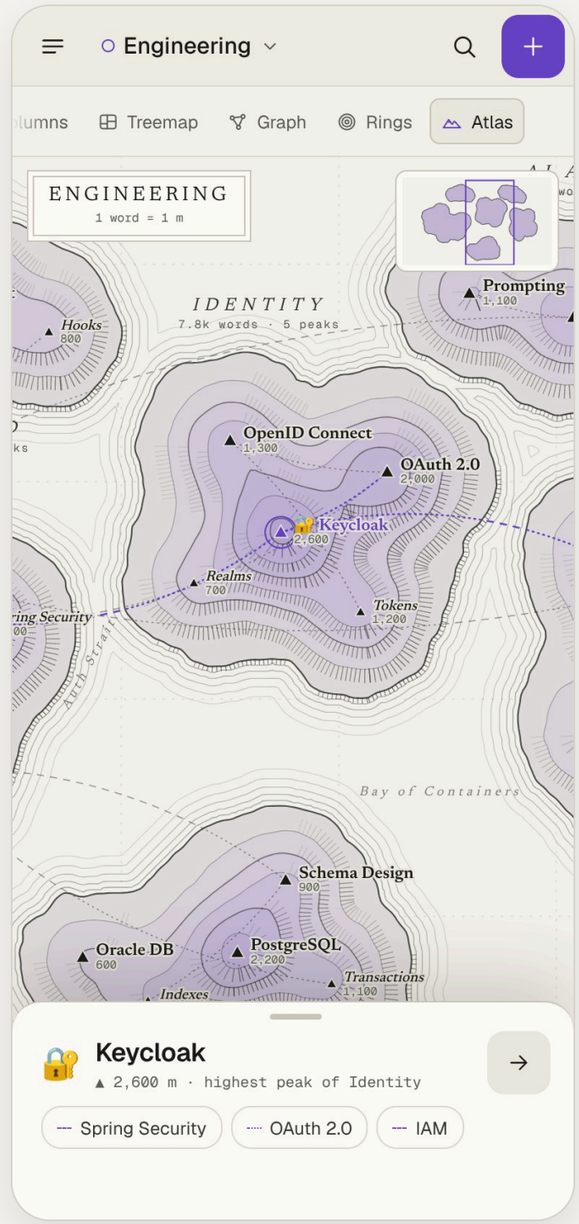

15 Growth rings

The disc on top, labelling only the selection and its threads; the sheet holds the core sample, the time picker and the leaf.

16 Atlas

A window onto the chart with an overview inset of the whole archipelago; the peek sheet lists the routes from the peak.

17 Atlas · Paper · Violet

The same screen in the light Paper theme.
